## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 19 and 21-37 are allowed.
2. The following is an examiner's statement of reasons for allowance.

Using a monopole and a dipole element together in a multiple element antenna is well known in the art. The limitations that further limit this invention are the limitations that distinguish it over the prior art. These are the limitations concerning fabricating the dipole element in close proximity to the monopole element on the same substrate so the two elements electromagnetically couple.

This arrangement was not found in the prior art.

While all of the recited elements and limitations can be found in the prior art, combining those prior art references was not proper because of the lack of proper motivation. In most cases, individual elements in a multiple element antenna are designed to function without cross coupling. Also, having both the monopole and the dipole elements being actively fed as opposed to one of the elements being passive was found to be further limiting. Having both elements formed on the same substrate was further limiting because often times a ground plane is required for the monopole and not required for the dipole operation, and having both elements on the same substrate makes it difficult to properly position the ground plane. As a result of these factors, any combination of prior art references would, in the examiner's opinion, would be done with hindsight reasoning.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
